Guy François : Les Canons de la Victoire 1914 - 1918: Tome 3: l'Artillerie de Cote et l'Artillerie de Tranchée (Les Materiels de l'Armee Francaise) (French Edition) before purchasing it in order to gage whether or not it would be worth my time, and all praised Les Canons de la Victoire 1914 - 1918: Tome 3: l'Artillerie de Cote et l'Artillerie de Tranchée (Les Materiels de l'Armee Francaise) (French Edition):

SchedelI purchased the first two volumes of this series back in 2010 but was unaware of this volume until very recently. Together they show the tremendous variety of WW I French artillery. For example, during the war the French deployed a grand total of 524 railroad guns of 37 different types, most of which were built in very limited numbers. This must have caused a logistical nightmare for French supply officers. These books cover all of these

weapons in photographs and color artwork. Although the test is in French, which I do not read, the basic details of each weapon are easy determined.0 of 0 people found the following review helpful. kaboomBy d. French Text This third volume of the Guns of Victory reviews two quite different types of equipment. First, the Coast Artillery, which played a very discreet role because the Allies had mastery of the seas. Most of the guns however became famous in another role, installed on railway carriages or on various other means of land transport adapted to a static war. The second group, the Trench Artillery, did not exist in France at the beginning of the war and had to be developed in chaotic conditions in the unexpected context of the colossal siege warfare imposed on the belligerents on the Western Front in the autumn of 1914. From the modest grenade launcher to the gigantic 340-mm trench mortar, this very structured volume deals with all the models of this frontline artillery, scrupulously following the pattern of the two previous volumes.
