Maybe because its stated goal is not to tell you exactly how to build one specific gun... a goal Holmes always seemed to fall short of. This book gives a good view of Holmes's character, a broad sample of the fruits of his impressive creativity, and yes there are lots of suggestions for trigger mechanisms and so forth that could

actually prove useful. Most of the advice given about machinery selection is basically good. In my opinion Bill Holmes had a lot of failings as an author, but this book was definitely worthwhile to me. Though again, you cannot learn everything the title promises by reading it. 0 of 0 people found the following review helpful. Home Workshop; better yet Home Machine shop By David R. Criser Home Workshop Prototype Firearms has been done in a very professional way. The author has had extensive experience in designing and manufacturing hunting rifles, shotguns, and semi-automatic weapons using his well furnished machine shop. If you have the tools and desire to follow in his footsteps, he will get you started with the correct materials and advice. His story of experiences in this line of work is also helpful and interesting. This book is for the serious minded and talented workman. 1 of 1 people found the following review helpful. A large brush, not enough paint By ROBERT L. QUEBERG This appeared to be an effort to cover a rather broad subject, in a rather narrow and basic manner. If this book was in a book store where I could give it a quick thumb review, it would not have been a resident of my home! I spent my entire working career as a toolmaker and helping a local gunsmith by doing lots of off the wall jobs. Take your chances if you have spare change to blow.

Master gun maker Bill Holmes shares what will and won't work in designing and building rifles and shotguns from raw materials. Includes the fine points of creating everything from actions to sights, as well as tips on tools, materials, assembly, finishing and more. For academic study only.

About the Author Bill Holmes is one of the last remaining links to a bygone era. He first learned about gunsmithing more than 50 years ago from a guy who took his "fix-it" wagon all around doing odd jobs. Since then, Bill has designed and constructed innumerable firearms, written seven books and been featured in two videos for Paladin and become one of the country's best-known and most highly respected authorities on home-workshop weapons and firearms laws.
