**James May : James May's Lego House** before purchasing it in order to gauge whether or not it would be worth my time, and all praised James May's Lego House:

0 of 0 people found the following review helpful. It can be done and here's how! By N. Douglas If you want to know just how to create sturdy, building-strength Lego brick components, this is the book for you. It also has lots of great ideas for interior furniture and living spaces. It has no diagrams or building instructions, as such, but is packed with great ideas and is an inspiration as to how far one can go with Lego as a real part of life. Well worth the price to me! 0 of 0 people found the following review helpful. as good as the DVD series By helen daunt this episode was my kids favourite of the series. I enjoyed it too - it was very exciting to see James May build a life size lego house. My son loves browsing the photos. this is a good compliment to the DVD and a must for all lego fans 0 of 0 people found the following review helpful. Fun Quick By Kimberly Okay so right off the bat I'm going to say that this is going to be a really short review because despite the fact that the book was 96 pages very few pages had any writing. However, this in itself does not make the book any less of an enjoyable read. You see a couple years ago my brother got me hooked on the British television show Top Gear and ever since then I've been quite amused by the three hosts, one of which is the author of this book James May also known as Captain Slow. So when I did a library search for books by him for my brother to read I had to put this one on hold. I had an obsession with LEGO as a kid and even now if you put me near a set I'll still play with them. There is just something about LEGO that makes you want to sit down and construct something regardless of your age. This little book chronicles the events leading up to, during and after the construction of this magnificent building which was sadly demolished not too long after its construction in 2009. 1,000 volunteers from all over the UK helped build the 20ft structure that now holds the Guinness World Record as the largest LEGO house in the world. I enjoyed this little bit of pop culture in book form. It was fun learning about the construction of the

house and his reasons for building it. I would recommend this as a gift for kids and maybe the older LEGO aficionados in the world.

Who would be crazy enough to build a full-sized, fully furnished two-story house-complete with washing machine, shower, and toilet-entirely out of LEGOs? Answer: James May and his team of helpers. The story of May's amazing house (which won the Guinness World Record for being the largest freestanding LEGO structure of all time) is told in James May's LEGO House, a book that, like the house it describes, is wall-to-wall fun. Marvel at the dedicated teamwork required to construct the house, chuckle at accessories like a LEGO mouse and cat, and laugh out loud at May's comical struggle with getting a good night's sleep on a LEGO bed.

About the Author James May is a well-known writer, broadcaster and co-presenter of BBC TV's Top Gear. He also writes a weekly motoring column for The Daily Telegraph. James enjoys cars, motorcycles, light aircraft and a drink, always in that order. He lives in London with Fuser, the world's most unpleasant cat.
